Table 1 Crystallographic data and refinement statistics.

Datasets Native2, Native3, NANA and DANA from frozen crystals were collected on beamlines X11 and BW7A at DESY, Hamburg. All other datasets were collected on in-house rotating anode and image plate or multiwire detector systems.

Remerge =  $\sum_{hkl} \sum_{i} |\sum_{hkl} i_{hkl} - \langle i_{hkl} \rangle| / \sum_{hkl} \sum_{i} \langle i_{hkl} \rangle$  where the sum i is over all separate reasurements of the unique reflections hkl.

$$R$$
-factor =  $\Sigma_{hkl}$   $||F_{obs}| - |F_{calc}|| / \Sigma_{hkl}$   $|F_{obs}|$ 

R<sub>free</sub>, as R-factor but summed over a 10% test set of reflections.
